### **Acknowledgments**

The Global Findex 2021 Database and Little Data Book on Financial Inclusion 2022 was prepared by the Finance and Private Sector Development team of the Development Research Group in the World Bank's Development Economics Vice Presidency (DEC). The team, led by Leora Klapper, Dorothe Singer, and Saniya Ansar, comprised Raaga Akkineni, Paul Gubbins, Mansi Panchamia, and Jijun Wang. Miriam Sangallo Kalembo and B. Elaine Wylie supplied the team with administrative support. Overall guidance was provided by Aart Kraay, director of development policy in DEC and deputy chief economist of the World Bank, and Deon Filmer, director of the Development Research Group in DEC.

Special thanks are extended to the senior leadership and managers in the World Bank's Equitable Growth, Finance, and Institutions Vice Presidency (EFI VP) for their partnership and guidance in preparing the Global Findex 2021 Database, including Jean Pesme, global director, and Mahesh Uttamchandani, practice manager, Finance, Competitiveness, and Innovation (FCI), EFI VP, as well as the FCI regional practice managers. The team is also grateful for the comments on early drafts provided by Denis Medvedev, Tim Ogden, and Sophie Sirtaine. The team is grateful to Oya Ardic, Jennifer Chien, Maria Teresa Chimienti, Eric Duflos, Xavier Giné, Rafe Mazer, Harish Natarajan, Rachel Pizatella-Haswell, Matthew Saal, and Imtiaz UI Haq, and to World Bank colleagues in the Development Economics and Equitable Growth, Finance, and Institutions Vice Presidencies and the International Finance Corporation's Financial Institutions Growth group and Sector Economics and Development Impact department for providing substantive comments at different stages of the project. Helpful substantive comments were also received from the Bill & Melinda Gates Foundation, Better Than Cash Alliance, Consultative Group to Assist the Poor, GSM Association, G20's Global Partnership for Financial Inclusion, Women's World Banking, Mastercard Center for Inclusive Growth, Visa Social Impact, and Office of the UN Secretary-General's Special Advocate for Inclusive Finance for Development (UNSGSA). The team appreciates as well the excellent survey execution and related support provided by Gallup, Inc., under the direction of Joe Daly and with the support of Cynthia English.

The team is grateful to the Bill & Melinda Gates Foundation, the Mastercard Foundation, and the World Bank's Development Economics and Equitable Growth, Finance, and Institutions Vice Presidencies for their financial support, which made the collection and dissemination of the data possible. The team is also grateful to Flourish Ventures for their financial support for and thought partnership in our financial well-being chapter.

Laura Starita provided developmental guidance in drafting this Little Data Book and led a team at Forge & Refine that included Kate Marshall Dole and Sara Laws. Gordon Schuit was the principal graphic designer The Little Databook was set up by Ana Florina Pirlea, the databank was set up by Hiroko Maeda, and interactive web visualizations were created by Divyanshi Wadwa and Kevin William Conklin, under the guidance of Umar Serajuddin. An online data visualization tool was created by Manar Eliriqsousi and his team, led by Misun Kim. Kristen Milhollin, Anugraha Palan and Shane Romig developed the communications and engagement strategy. Mikael Reventar and Roula Yazigi provided web and online services and related guidance.

Team members would also like to offer their gratitude to the over half-million adults around the world who took the time to participate in the Global Findex survey over the past decade.

By H.M. Queen Máxima of the Netherlands United Nations Secretary-General's Special Advocate for Inclusive Finance for

United Nations Secretary-General's Special Advocate for Inclusive Finance for Development (UNSGSA)

It has been four years since we last had a window into the state of global financial inclusion. This updated edition of the Global Findex Database remains an indispensable tool, providing a fresh opportunity to take stock of what has been achieved and the work ahead.

For many years, I have championed financial technology as a pathway to greater prosperity and financial health. We now have more evidence it is working.

This report shows a global technological revolution has fueled a sharp rise in the use of digital financial services. This includes a jump in digital payments usage from 35 percent in 2014 to 57 percent today in developing economies—deepening financial inclusion. From India to Kenya, the smallest merchants in rural markets and smallholder farmers receive and make payments with the mobile phones in their pockets.

We also learned that millions more women have a financial account, resulting in a narrowing of the gender gap from nine to six percentage points in developing economies, and from seven to four percentage points globally. Still, women remain far less likely to have ID, possess a mobile phone, and use digital payments.

New insights from the Global Findex Database on financial worrying paint a better picture of people's financial health. It also shines a light on how people are becoming more resilient to shocks like job loss, illness, crop failure, or natural disasters. In times of financial stress, people often turn to family and friends for help. But when everyone is under the same stress, such as during a pandemic or a drought, social networks can be unreliable.

Financial inclusion offers more resilience. For instance, research shows that when a woman gets an account, she builds savings, spends more on her children's education, and invests in business opportunities.

The Global Findex 2021 data charts all this progress and more. But it also shows we have reached a turning point.

Most people who can easily open a bank account have done so. The next step is to ensure they can access other services—like payments, savings, credit, and insurance—that truly meet their needs and build resilience. New approaches will also be needed to reach the nearly 30 percent of adults in developing economies who remain unbanked.

To reach them, economies should invest in digital public goods that work for everyone, especially the underserved. More inclusive financial policies to connect rural customers to the internet, government, and the private sector are also key. Digitalizing payment flows for the hundreds of millions of unbanked still receiving payments in cash is one such example.

Worldwide, people are using mobile phones and apps to pay bills, save money, and run their businesses. This makes it vital to redouble efforts to protect and empower customers, as well as to help them build digital and financial literacy skills.

Congratulations on the new edition of this milestone report. The data it provides will guide our efforts and help make the dream of universal access to finance a reality.

By David Malpass President, World Bank Group

The technological revolution, and the accelerated adoption of digital solutions as a result of the COVID-19 pandemic, are transforming access to finance. As this edition of The Global Findex Database shows, 71 percent of adults in developing economies now have a formal financial account, compared to 42 percent a decade ago when the first edition of the database was published. And the gap in access to finance between men and women in developing economies has fallen from 9 percentage points to 6 percentage points.

This is an important transformation for development. Having a financial account makes it easier, safer, and cheaper to receive wage payments from employers, to send remittances to family members, and to pay for goods and services. Mobile money accounts also make it possible, even for the poor, to save and cope with adverse shocks. And individual accounts give women more say on their household finances.

Importantly, the digital revolution is a powerful tool to improve governance. Social programs can now channel transfers directly to their beneficiaries' mobile phones, reducing leakage and delays. This potential became a reality during the COVID-19 crisis, helping cushion its impact on livelihoods. Digitalization also increases transparency as money flows from a country's budgets to government agencies to people, reducing the scope for corruption.

This edition of The Global Findex Database shows clear advances under way. The share of adults making or receiving digital payments in developing economies grew from 35 percent in 2014 to 57 percent in 2021, outpacing growth in account ownership. In Sub-Saharan Africa, 39 percent of mobile money account holders now use their account to save. And more than one-third of adults in developing economies who paid a utility bill from an account did so for the first time after the start of the COVID-19 pandemic—evidence of the pandemic's impact on digital adoption.

It is critical to build on these encouraging trends, especially given the current headwinds. High inflation, slow economic growth, and food scarcity will affect the poor the most. Expanding their access to finance, reducing the cost of digital transactions, and channeling wage payments and social transfers through accounts will be critically important to mitigate the reversals in development from the ongoing turbulence.

Further supporting this transformation requires decisive action across three areas:

1. Creating an enabling policy environment. Progress in access to finance depends on the mobile phone much more than the banking system. Ubiquitous and affordable internet access is therefore a prerequisite to further progress. More progress is also needed on the policy front. The lack of verifiable identity is one of the main reasons why adults remain excluded from financial services. India has pioneered

a successful model for universal identity, paying due attention to safety and privacy. The interoperability of systems and the availability of a low-cost switch for financial transactions are equally important. Consumer protections and stable regulations are needed to foster safe and fair practices by financial and technology companies.

- 2. Promoting the digitalization of payments. The Global Findex 2021 data show that 865 million account owners in developing economies opened their first financial institution account for the purpose of receiving money from the government. This helped households directly and also helps build digital payment systems. It serves as a foundation to assemble credible social registers, identifying gaps and overlaps along the way. As digital payments become more common and the cost falls, many private businesses will be able to pay their workers and suppliers electronically—and should. The digital revolution offers a chance to increase formal sector employment without making compliance overburdening. At a time of tighter budget constraints, digital payments can help reduce tax avoidance and evasion, broadening the tax base.
- 3. Emphasizing access for women and the poor. The gender gap in access to finance has narrowed, but it still exists. Women, along with the poor, are more likely to lack identification or a mobile phone, to live far from a bank branch, and to need support to open and effectively use a financial account. Policy makers will need to make additional efforts to include underserved population groups in the ongoing transformation. Financial education programs are among the tools to consider, and they are bound to be more effective if they involve peer-to-peer learning, for instance through women's self-help groups.

At the World Bank we are firmly committed to financial inclusion through digitalization. Through country engagements, we are supporting our counterparts in boosting mobile phone networks, removing regulatory barriers to foster access to finance. We are also helping with the adoption of e-government platforms and the modernization of social protection systems.

Improving the knowledge on financial inclusion is part of our contribution, and the Global Findex Database is one of its cornerstones.

### **Introduction**

The Little Data Book on Financial Inclusion 2022 is a pocket edition of the Global Findex Database 2021. The Global Findex is the world's most comprehensive database on financial inclusion. It is also the only global demand-side data source allowing for global and regional cross-country analysis to provide a rigorous and multidimensional picture of how adults save, borrow, make payments, and manage financial risks. Results from the first survey were published in 2011, and have been followed by subsequent survey results from 2014 and in 2017. The 2021 edition, based on nationally representative surveys of about 128,000 adults in 123 economies, offers a lens into how people accessed and used financial services during the COVID-19 pandemic, when mobility restrictions and health policies drove increased demand for digital services of all kinds.

The Global Findex Database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by policymakers, researchers, and development practitioners, Global Findex data are used to track progress toward the United Nations Sustainable Development Goals.

The database, the full text of the report, and the underlying economy-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at http://www.worldbank.org/globalfindex.

The reference citation for the Global Findex Database 2021 data provided in this book is as follows:

Demirgüç-Kunt, Asli, Leora Klapper, Dorothe Singer, and Saniya Ansar. 2022. The Global Findex Database 2021: Financial Inclusion, Digital Payments and Resilience in the Age of COVID-19. World Bank: Washington, DC.

### Data notes

The data in this book are for 2021 unless otherwise noted in the tables or the glossary.

Regional aggregates include data for low- and middle-income economies only.

Figures in italics are for years or periods other than those specified.

### Symbols used:

- .. indicates that data are not available and the aggregates cannot be calculated because the question was not surveyed.
- ..\* indicates that data are not available and the aggregates cannot be calculated because of too few observations.
- 0 or 0.0 indicates zero or a value small enough that it would round to zero at the number of decimal places displayed.
  - \$ indicates current U.S. dollars.

Data are shown for 123 economies. The term *country* (used interchangeably with *economy*) does not imply political independence or official recognition by the World Bank but refers to any economy for which the authorities report separate social or economic statistics.

### **Regional tables**

The country composition of regions as used in this book is based on the World Bank's analytical regions and may differ from common geographic usage.

### **Income group tables**

The World Bank's main criterion for classifying economies for operational and analytical purposes is gross national income (GNI) per capita. Each economy for which data are presented in this book is classified as low income, lower middle income, upper middle income, or high income based on its GNI per capita in 2021. Low and middle income economies are sometimes referred to as developing economies. The use of the term is convenient; it is not intended to imply that all economies in the group are experiencing similar development or that other economies have reached a preferred or final stage of development. Classification by income does not necessarily reflect development status. An economy's income classifications remains fixed over the course of the World Bank's fiscal year (ending on June 30) regardless of any revisions during the year to their income per capita data.

**Low income** economies are those with a GNI per capita of \$1,045 or less in July 1, 2021.

**Lower middle income** economies are those with a GNI per capita between \$1,046 and \$4,095.

**Upper middle income** economies are those with a GNI per capita between \$4,096 and \$12,695.

High income economies are those with a GNI per capita of \$12,695 or more.

### Low income

Not very difficult to access emergency money in 30 days (% age 15+)

All adults, 2021 Women

Adults in the poorest 40% of households

78.8

76.1 67.7

15

### **Country tables**

### Afghanistan

Gender-matched sampling was used during the final stage of selection.

### Albania

People living in remote or difficult-to-access rural areas were excluded. The excluded area represents approximately 2 percent of the total population.

### Armenia

Settlements near territories disputed with Azerbaijan were not included for security reasons. The excluded area represents approximately 3 percent of the total population.

### **Burkina Faso**

Some communities in the East and Sahel regions were excluded for security reasons. The areas represent 4 percent of the total population.

### Cambodia

Koh Kong, Stueng Treng, Otdor Meanchey, and Kep provinces were excluded. These areas represent approximately 3 percent of the total population of Cambodia.

### Cameroon

Some arrondissements in the Extreme North region, the Northwest region, and the South West region were excluded for security reasons. Neighborhoods with less than 50 households were also excluded from the sample. The exclusion represents 20 percent of the total population.

### Canada

Northwest Territories, Yukon, and Nunavut (representing approximately 0.3 percent of the Canadian population) were excluded.

### China

Tibet was excluded from the sample. The excluded areas represent less than 1 percent of the total population of China.

### Egypt, Arab Rep.

Frontier governorates (Matruh, Red Sea, New Valley, North Sinai, and South Sinai) were excluded, as they are remote and represent a small proportion of the population of the country. The excluded areas represent less than 2 percent of the total population.

### Georgia

South Ossetia and Abkhazia were not included for the safety of the interviewers. In addition, very remote mountainous villages or those with less than 100 inhabitants were also excluded. The excluded areas represent approximately 8 percent of the total population.

### **Country tables**

### Ghana

Localities with less than 100 inhabitants were excluded from the sample. The excluded areas represent approximately 4 percent of the total population.

### India

Excluded populations living in Northeast states and remote islands and Jammu and Kashmir. The excluded areas represent less than 10 percent of the total population.

### Israel

The sample does not include the area of East Jerusalem. This area is included in the sample of West Bank and Gaza.

### Japan

For landline random digit dialing, excluded 12 municipalities near the nuclear power plant in Fukushima. These areas were designated as not-to-call districts due to the devastation from the 2011 disasters. The exclusion represents less than 1 percent of the total population of Japan.

### Lao PDR

Excluded Xaisomboun Province, Xayaboury Province, and some communes that are unreachable or have security considerations. In addition, during fieldwork Attapu and Houaphan were also excluded due to COVID-19 (COVID-19 red zones). The excluded areas represent approximately 14 percent of the total population.

### Malavsia

Labuan and Putrajaya were excluded due to low population. The excluded areas represent approximately 1 percent of the total population.

### Mali

The regions of Gao, Kidal, Mopti, and Tombouctou were excluded for security reasons. Quartiers and villages with less than 50 inhabitants were also excluded from the sample. The excluded areas represent 23 percent of the total population.

### Moldova

Transnistria (Prednestrovie) excluded for safety of interviewers. The excluded area represents approximately 13 percent of the total population.

### Mozambique

Cabo Delgado province, as well as a small number of districts in other provinces, were excluded for security reasons. The excluded areas represent 11 percent of the total population.

### Nigeria

The states of Adamawa, Borno, and Yobe were excluded for safety and security reasons. These states represent 7 percent of the total population.

17

### **Country tables**

### **Pakistan**

Did not include Azad Jammu and Kashmir (AJK) and Gilgit-Baltistan. The excluded area represents approximately 5 percent of the total population. Gender-matched sampling was used during the final stage of selection.

### Saudi Arabia

Includes Saudis, Arab expatriates, and non-Arabs who were able to complete the interview in Arabic, English, Urdu, or Hindi.

### Singapore

Twenty-eight of 55 Planning Areas were excluded due to zero or small population size, accounting for less than 3 percent of the total population. In addition, individuals living in private condos or landed properties were excluded, representing approximately 20 percent of households in Singapore.

### South Sudan

Some areas were excluded due to territorial dispute, security reasons, or inaccessibility. The excluded areas represent approximately 10 percent of the total population. In addition, 40 percent of the primary sampling units (PSUs) were replaced during fieldwork, primarily due to flooding.

### Uganda

Three districts in the North region were excluded for security reasons— Kotido, Moroto, and Nakapiripirit. The excluded areas represent 2 percent or less of the total population.

### **United Arab Emirates**

Includes only Emiratis, Arab expatriates, and non-Arabs who were able to complete the interview in Arabic, English, Hindi or Urdu.

### West Bank and Gaza

Areas with security concerns close to the Israeli borders, areas that are accessible only to special Israeli permit holders, and areas with population concentrations of less than 1,000 people were excluded. The excluded areas represent less than 2 percent of the total population. The sample includes East Jerusalem.

### Afghanistan

### Glossary

**Account (% age 15+):** The percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution (see *financial institution account*), or report personally using a mobile money service in the past year (see *mobile money account*).

**Borrowed any money (% age 15+):** The percentage of respondents who report borrowing any money (by themselves or together with someone else) for any reason and from any source in the past year.

**Borrowed formally, including using a credit card (% age 15+):** The percentage of respondents who report borrowing any money from a bank or another type of financial institution or from a mobile money service or via a credit card.

**Borrowed from a savings club (% age 15+):** The percentage of respondents who report borrowing any money from an informal savings club in the past year.

**Borrowed from family or friends (% age 15+):** The percentage of respondents who report borrowing any money from family, relatives, or friends in the past year.

Not very difficult to access emergency money in 30 days (% age 15+): The percentage of respondents who say it is possible and not difficult at all or somewhat difficult to come up with 1/20 of gross national income (GNI) per capita in local currency units in 30 days.

Financial institution account (% age 15+): The percentage of respondents who report having an account (by themselves or together with someone else) at a bank, credit union, microfinance institution, or post office that falls under prudential regulation by a government body.<sup>1</sup>

Made a digital payment (% age 15+): The percentage of respondents who report using a debit or credit card, a mobile phone, or mobile money to make a payment from an account; or who report using the internet to pay bills or to buy something online or in a store in the past year. This includes respondents who report paying bills or sending remittances directly from a financial institution account or through a mobile money account in the past year.

Made a digital merchant payment (% age 15+): The percentage of respondents who report using a debit or credit card, or a mobile phone, to make a purchase in-store, or to pay online for an internet purchase.

Made first digital merchant payment during COVID-19 (% age 15+): The percentage of respondents who report that the first time they used a debit or credit card, or a mobile phone, to make a purchase in-store or to pay online for an internet purchase, happened after COVID-19 started.

Made a digital utility payment (% age 15+): The percentage of respondents who report personally making regular payments for water, electricity, or trash collection in the past year directly from a financial institution account or a mobile phone.

Made first digital utility payment during COVID-19 (% age 15+): The percentage of respondents who report personally making regular payments for water, electricity, or trash collection using a financial institution account or a mobile phone for the first time after COVID-19 started.

Made or received a digital payment in the past year (% age 15+): The percentage of respondents who report using mobile money, a debit or credit card, or a mobile phone to make a payment from an account—or report using the internet to pay bills or to buy something online or in a store—in the past year. This includes respondents who report paying bills, sending or receiving remittances, receiving payments for agricultural products, receiving government transfers, receiving wages, or receiving a public sector pension directly from or into a financial institution account or through a mobile money account in the past year.

**Mobile money account (% age 15+):** The percentage of respondents who report personally using a mobile money service to make payments, buy things, or to send or receive money in the past year.<sup>2</sup>

Opened first account to receive government or wage payment (% age 15+):
The percentage of respondents who report opening a financial institution account for the first time to receive a wage payment or to receive money from the government.

**Received a digital payment (% age 15+):** The percentage of respondents who report using a mobile money account, a debit or credit card, or a mobile phone to receive a payment into an account in the past year. This includes respondents who report receiving remittances, receiving payments for agricultural products, receiving government transfers, receiving wages, or receiving a public sector pension directly into a financial institution account or into a mobile money account in the past year.

Received a government payment into an account (% age 15+): The percentage of respondents who report personally receiving payments from the government (government transfers, public sector pension, or public sector wages) in the past year directly into a financial institution account, into a card, or through a mobile phone.

Received a private sector wage into an account (% age 15+): The percentage of respondents who report being employed in the private sector and receiving any money from their employer in the past year in the form of a salary or wages for doing work, and who received that money directly into a financial institution account, into a card, or through a mobile phone.

**Saved any money (% age 15+):** The percentage of respondents who report personally saving or setting aside any money for any reason and using any mode of saving in the past year.

**Saved using an account (% age 15+):** The percentage of respondents who report saving or setting aside any money at a bank or another type of financial institution or using a mobile money account to save in the past year.<sup>3</sup>

### Glossary

Saved using a savings club or a person outside the family (% age 15+): The percentage of respondents who report saving or setting aside any money in the past year by using an informal savings club or a person outside the family.

Sent or received a domestic remittance payment using an account (% age 15+): The percentage of respondents who report personally sending or receiving any of their money in the past year to or from a relative or friend living in a different area of their country and who sent or received the money using a financial institution account or a mobile money account.

**Used account to store money for cash management (% age 15+):** The percentage of respondents who report keeping money in a financial institution account or a mobile money account.

#### **Notes**

- 1. Data on adults with a financial institution account include respondents who reported having an account at a bank or at another type of financial institution, such as a credit union, a microfinance institution, a cooperative, or the post office (if applicable). The data also include an additional 3 percent of respondents in 2021 who reported receiving wages, government transfers, a public sector pension, or payments for agricultural products into a financial institution account in the past year; paying utility bills or school fees from a financial institution account in the past year; or receiving wages, government transfers, or agricultural payments into a card in the past year. The definition does not include nonbank financial institutions such as pension funds, retirement accounts, insurance companies, or equity holdings such as stocks. As used throughout the report, financial institution refers to a formal financial institution.
- 2. Data on adults with a mobile money account include respondents who reported personally using services included in the GSM Association's Mobile Money for the Unbanked (GSMA MMU) database to pay bills or to send or receive money in the past year. The data also include an additional 2 percent of respondents in 2021 who reported receiving wages, government transfers, a public sector pension, or payments for agricultural products through a mobile phone in the past year. Unlike the definition of account at a financial institution, the definition of mobile money account does not include the payment of utility bills or school fees through a mobile phone. The reason is that the phrasing of the possible answers leaves it open as to whether those payments were made using a mobile money account or an over-the-counter service.
- 3. The 2017 questionnaire did not survey the use of mobile money to save.
